Question 2

```
#include<iostream>
using namespace std;
void merge(int[], int, int, int);
void merge_sort(int[], int, int);
void Display_array(int[], int);
int main()
{
       int array[] = \{1,6,3,2,7,5,8,4\};
       int arr_size = sizeof(array) /sizeof(array[0]);
       cout<<"Given array is: \n";
       Display_array(array, arr_size);
       merge_sort(array, 0, arr_size-1);
       cout<< "\nThe sorted array is : \n";</pre>
       Display_array(array, arr_size);
       return 0;
}
void merge(int Arr[], int lt, int mid, int rt)
{
       int L1 = mid-lt+1;
       int L2 = rt-mid;
       int i, j, k;
       auto *left =new int[L1], *right =new int[L2];
       for(int i=0; i<L1; i++)
       left[i] = Arr[lt+i];
       for (int j=0; j<L2; j++)
       right[j] = Arr[mid+1+j];
       i=j=0;
```

```
k=1;
       while(i<L1 && j<L2){
               if (left[i] <= right[j]) {</pre>
               Arr[k] = left[i];
               i++;
       }
       else{
               Arr[k] = right[j];
               j++;
}
       k++;
}
  while(i<L1)
   Arr[k++] = left[i++];
   while (j < L2)
    Arr[k++] = right[j++];
  }
 void merge_sort(int Arr[], int l, int r)
 {
       if (1 < r){
               int mid = 1 + (r-1)/2;
               merge_sort(Arr, l, mid);
               merge_sort(Arr, mid+1, r);
               merge(Arr, l, mid, r);
        }
         }
       void Display_array(int a[], int size)
```

```
{
             for (int i = 0; i < size; i++)
             cout<<a[i]<< " "
               }
                                                                    ms(0,7)
                                                                                                                             merge(0,3,7)
                  ms(0,3)
                                                                          ms(4,7)
ms(0,1)
                      ms(2,3)
                                    mg(0,1,3)
                                                                                ms(6,7)
                                                                                                 mg(4,5,7)
                                 mg(2,2,3) \frac{1}{ms(4,4)}
ms(1,1) mg(0,0,1) ms(2,2) ms(3,3)
```

mg(4,4,5) ms(6,6)

ms(7,7)

mg(6,6,7)

ms(5,5)

At the first call in Merge_sort l is 0 and r is 7

At the first recursive call in Merge_sort l is 0 and r is 3

At the first recursive call in Merge 1 is 0 and r is 1

At the second recursive call in Merge 1 is 2 and r is 3
